

System Requirements Specifications (SRS)

As sunnah Foundation ERP System (Version: New)

SRS Version 1.0 • 09 December 2025

Preface

Style Conventions

The following style conventions are used in this document:

Bold

Names of commands, options, programs, processes, services, and utilities

Names of interface elements (such windows, dialog boxes, buttons, fields, and menus)

Interface elements the user selects, clicks, presses, or types

Italic

Publication titles referenced in text

Emphasis (for example a new term)

Variables

Courier

System output, such as an error message or script

URLs, complete paths, filenames, prompts, and syntax

Courier italic

Variables on command line

User input variables

< > Angle brackets enclose parameter or variable values supplied by the user

[] Square brackets enclose optional values

| Vertical bar indicates alternate selections - the bar means "or"

{ } Braces indicate content that you must specify (that is, x or y or z)

Change history

Date	Version	Created by	Description of change
17-Nov -2025	1.0	Technical Business Analyst	Initial Document
09-Dec-2025	1.1	Technical Business Analyst	Updated Document

Glossary of Terms

Term/Acronym	Definition
Constrains	Constraint is something that limits or controls the scopes
Assumption	Thing that is accepted as true or as certain to happen, without proof
Dependencies	Dependency is additional code that a programmer wants to call
SRS	System Requirement Specification document
Dashboard	Visual interface showing key HR insights such as headcount, attendance, leave, payroll, etc.
Biometric Integration	Linking fingerprint/face recognition devices to record attendance automatically.
ATS	Applicant Tracking System
Hierarchy	Organizational structure showing reporting lines and roles
KPI	Key Performance Indicator
OT	Overtime- Extra working hours eligible for compensation as per policy
Performance Appraisal	Periodic evaluation process of employees by managers/HR.
Payroll	Module for salary processing, tax, deductions, payslips, and disbursement

Introduction

The introduction of the Software Requirements Specification (SRS) provides an overview of the entire SRS with purpose, scope, definitions, acronyms, abbreviations, references, and overview of the SRS. The aim of this document is to gather and analyze and give an in-depth insight of the complete **ASF ERP system** by defining the problem statement in detail. Nevertheless, it also concentrates on the capabilities required by stakeholders and their needs while defining high-level product features. The detailed requirements of the **ASF ERP system** are provided in this document.

1.1 Purpose of this document

The purpose of the document is to collect and analyze all assorted ideas that have come up to define the system, its requirements with respect to end users and stakeholders. Also, we shall predict and sort out how we hope this product will be used to gain a better understanding of the project, outline concepts that may be developed later, and document ideas that are being considered, but may be discarded as the product develops.

In short, the purpose of this SRS document is to provide a detailed overview of our software product, its parameters, and goals. This document describes the project's target audience and its user interface, hardware, and software requirements. It defines how our client, team and audience see the product and its functionality. Nonetheless, it helps any designer and developer to assist in software delivery lifecycle (SDLC) processes.

1.2 Scope of HRM Module

To automate daily operation of the As-sunnah foundation we will develop a ERP system which will cover the below modules:

- Human Resource Management System (**HRM**)
- Training Center Management system (**TCMS**)
- Accounts Management System (**AMS**)
- Asset Management System (**AMS**)
- Charity and Social Service (**CSS**) Project Management system
- Purchase and Procurement system (**PMS**)

Human Resource Management System (HRM) Module:

The ERP-HRM module for ASF Office serves as a **centralized human resource management system** that manages complete employee information and automates core HR processes across multiple institutions and branches. The module covers:

- Employee Administration
- Attendance Management

- Leave Management
- Payroll Management
- Provident Fund
- Expense Management
- Notice & Notifications
- User & Security Management

Scope includes
In Scope • Workforce administration (employee master data, hierarchy, roles, branches, departments, institutions) • Time and attendance with biometric login/logout tracking • Leave automation with approval workflows and leave balance tracking • Monthly payroll including salary breakdown, statutory deductions, arrear, tax, and allowances • Employee financial contributions (Provident Fund – employer & employee) • Expense claims and reimbursements with category management and reporting • Internal engagement & communication (Digital notice board, SMS/email alerts) • Security and user role governance (role-based authentication, unlimited user creation, profile & password management)

Scope excludes
Mobile App
Data analytics like Power BI reporting, ETL Pipeline development

1.3 Overview

The remaining sections of this document provide a general description, including characteristics of the users of this application, the application's hardware, and the functional and data requirements of the application. General description of the project is discussed in section 1.4 of this document. Section 3 gives the functional requirements, data requirements and constraints and assumptions made while designing the ASF ERP system. It also gives the user viewpoint of the product. Section 3 also gives the specific requirements of the product. Section 3 also discusses the external interface requirements and gives detailed description of functional requirements. Section 4 is for system requirements.

1.4 Overall Description

This document contains the problem statement that the key stakeholders are facing which is hampering the uninterrupted human resource management process. It further contains a list of the stakeholders and users of the proposed solution. It also illustrates the needs and wants of the stakeholders that were identified in the brainstorming exercise as part of the requirements gathering workshop. It further lists and briefly describes the major features and a brief description of each of the proposed system features for the web versions.

The following SRS contains the detail product perspective from different stakeholders. It provides the detail product functions of ASF ERP system with user characteristics permitted constraints, assumptions and dependencies and requirements subsets

1.5 Assumptions

The functional requirements and use cases defined in this document are based upon the following assumptions:

Ref #	Assumption	Impact
US_ASM_001	Resources: - End users will be available to test during the time they agreed to - Training environment will be available in the cloud and offline as needed	Handover, go live and final signoff
US_ASM_002	Delivery: - Project environment fully configured and available as expected - Test cases created, training environment configured and available in the cloud and offline	Handover, go live and final signoff

US_ASM_003	Budget: • Project costs will stay the same as initially budgeted costs • Training will be conducted internally with no additional training costs incurred	Project budget
US_ASM_004	Finances: • Funding for development will be available when needed	Implementation
US_ASM_005	Scope: • The project scope will not change once the stakeholders sign off on the scope statement	Project scope
US_ASM_006	Schedule: • Materials and other third-party tools will be available as planned within the project schedule • Offshore development contracts will be fully executed within 2 weeks of offshore development team selection	Project completion
US_ASM_007	Methodology: • Project will follow Agile Scrum methodology throughout the execution • Project will follow team governance guidelines and requirements	Project execution

US_ASM_008	Technology: • The team will write the solution in MERN Stack framework • The solution will use a new test environment setup on AWS/GCP • The solution will be hosted on AWS/GCP • The solution will be installed locally • The solution will work on all compatible browsers	This will impact the ease of solution installation and setup by end-users
US_ASM_009	Architecture and Design: • The solution will utilize REST API architecture • The solution will reside in an offside AWS/GCP cloud	

1.6 General Constraints

Constraint	Impact
There will be only one system admin in the system.	Can create, edit and delete other Admin users.
The delete operation is available only to the administrator.	To reduce the complexity of the system, there is no check on delete operation.
System admin will be responsible for data consistency.	System admin should be very careful before deletion of any record

1.7 Dependencies

ASF ERP system will operate under the following dependencies:

Ref #	Dependency	Description
US_GLB_DEP_001	MERN full stack developers	The successful completion of this project depends on the availability of qualified MERN full-stack developer for the entire duration of the project

US_GLB_DEP_002	Scopes gathering	The successful completion of the project also depends on the Business analyst as he need to gather and verified the scopes with all stakeholders.
US_GLB_DEP_003	AWS Cloud development environment	Proposed system has dependency to deploy in the AWS cloud
US_GLB_DEP_004	Third-party REST APIs and Nodejs modules	Proposed system has also dependency on third-party APIs and Nodejs Modules
US_GLB_DEP_005	SMS, Payment gateway Integration	Developed system need to integrate with SMS & payment gateway.
US_GLB_DEP_006	Integrations	System has dependencies with other REST APIs integration
US_GLB_DEP_007	Availability of BI report designer	BI reports has data dependencies and varies user to users.

2 Product Functions

This chapter provides a general description of the product(s) characteristics. It does not state specific requirements; these sections provide information that makes the requirements, defined in detail in the following chapters, easier to understand.

2.1 Product Perspective

This application will be an online web-based ERP solution with the objective to automate HRM, Accounts, Training process, assets management, Charity activities management and other modules as per As-sunnah foundation requirements.

ASF ERP system should have some core modules that including HRM, Accounts, Training process, assets management, Charity activities management, user management & CRM etc.

SMS, Email and payment gateway integration need to be integrated in this **ASF ERP system** for quick notifications and payment process, also need to integrate live chat as well as in the 2nd phase. The application will be Scalable to integration with any third-party portal when needed.

A high-quality web base application needs to develop with dynamic and responsive user interface, which should be simple and interactive to novice users.

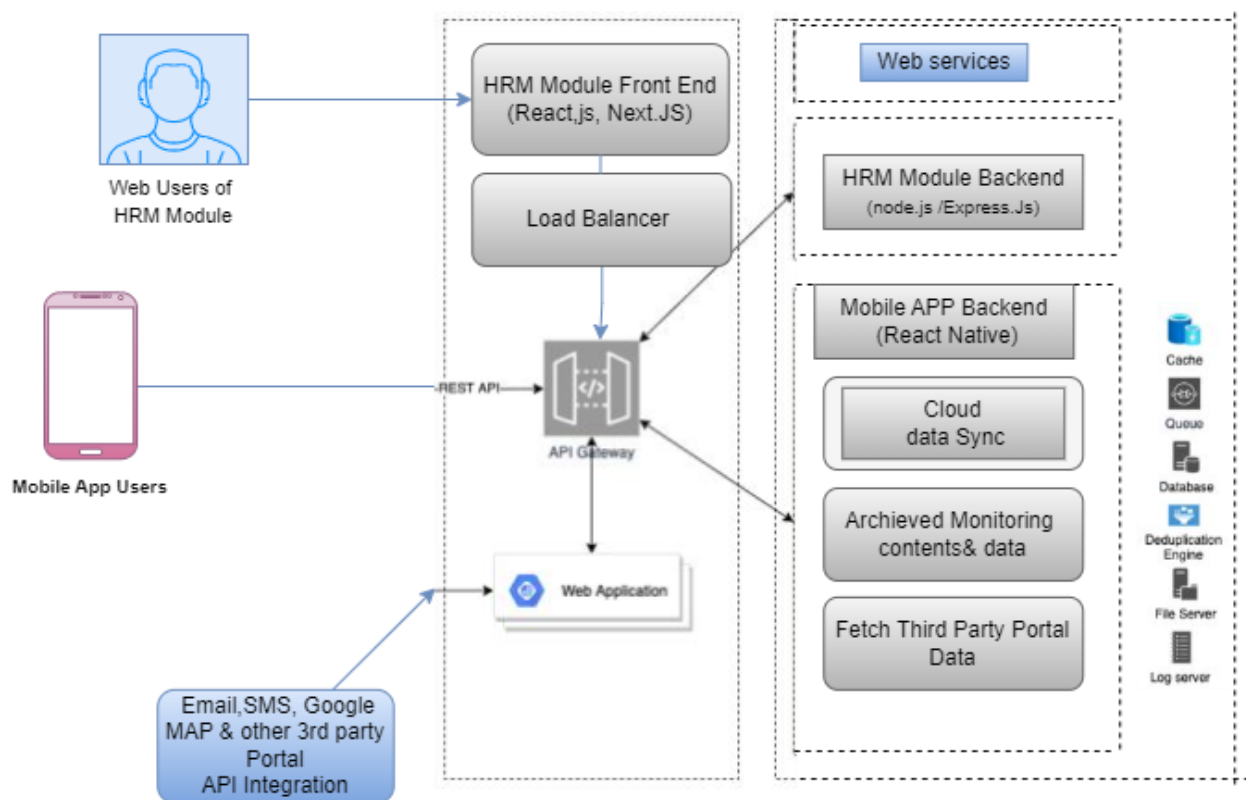

2.2 Product Functions

The application produced from these requirements shall functions are as below:

Function	Description
#1	Admin will add users account to the application database as per requirements
#2	Super admin feature to add, change, or delete any users account & users role management.
#3	HR Manager User will be able to register employee in the system, can see user profile, attendance Management, Leave balance adjustment.
#4	Training Manager can manage the whole Training process and activities
#5	Accounts manager will be able to manage all income, expenses, employee payroll and other accounting treatment as per accounts module
#6	All charity and social activities will be managed by the manager role from CSS Module

#7	All purchase, damage and supplier will be managed by procurement module
#8	Payment gateway, Instant SMS, Email Notification functionalities will be implemented

2.3 Application Architecture

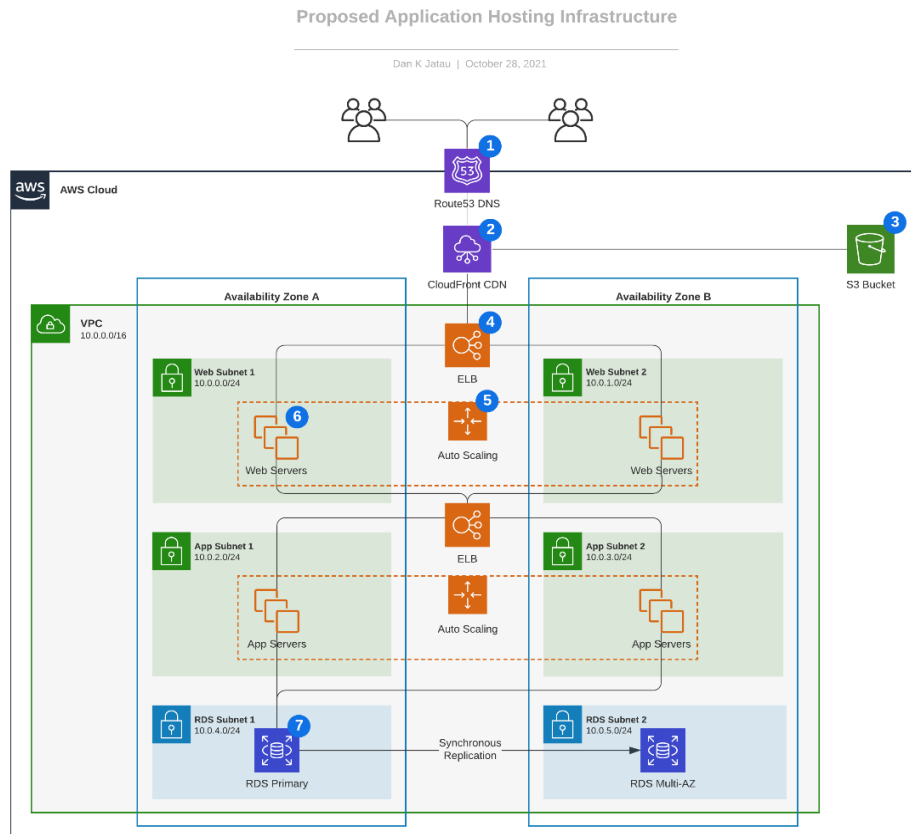

System Architecture of ASF ERP System (HRM Module)

2.4 Operating Environment

The application operating environment shall be in cloud server as depicted in the diagram below.

2.4.1 Proposed Application Hosting Environment

2.4.2 Reacts/Nodes Application Steps

- Initial requirements and package installation
- Repository structure
- React front-end boiler plate
- Nodejs backend boilerplate
- Front-end and backend communication
- Preparation for deployment to production
- Deployment to production
- Pushing updates to production application

2.5 User Characteristics for HRM Module

Describe the characteristics of user groups who will interact with the system and any characteristics that might affect the system design are described here:

Role Name	No. of Users	Responsibility / Activity
Super Administrator	1	▪ Super admin user who creates, setup and administers portal general user's account, admin and accounting users' access to the application. ▪ Create, edit, delete all users ▪ Assign roles & permissions ▪ Create custom user roles ▪ Configure biometric attendance settings ▪ Manage system parameters (salary templates, PF rules, tax settings) ▪ Full access to: ○ Employees ○ Payroll ○ Leave ○ Attendance ○ Expense Management ○ Policy ○ Notice Board ○ Reports
HR Administrator	1	▪ Add new employee ▪ Edit employee information ▪ Update employment status ▪ Upload documents (CV, image, NID, bank info) ▪ View complete employee profile ▪ View attendance logs ▪ Generate attendance reports ▪ Download/export attendance ▪ Leave management ▪ Salary and payroll management ▪ View, verify and manage expense claims ▪ Can manage notice board

HR Manager/supervisor/line manager	Unknown	Uses the application as follows ▪ View team employee list ▪ View basic employee profile ▪ Approve/Reject leave for direct reports ▪ View employees' attendance summary ▪ Monitor team expense claims & approve (if applicable) ▪ View notices relevant to department ▪ Generate reports related to their teams
HR Officer	Unknown	▪ Able to see and update profile ▪ View team employee list ▪ View basic employee profile ▪ Can see attendance details ▪ Able to add claim expense ▪ Can view notices ▪ View reports as per role permission
Accounts / Finance Officer	Unknown	▪ View payroll list ▪ Process monthly salary ▪ Verify salary calculations ▪ Disburse salary (bank/cash/cheque) ▪ Upload bank templates ▪ Generate pays lips & send by email ▪ Manage employer & employee PF contributions ▪ Review and approve expense claims ▪ Generate payroll, PF & Tax report

Employee	Unknown	▪ Submit leave applications View leave balance & leave history ▪ View attendance percentage/history ▪ Submit expense claims ▪ Upload expense proof documents ▪ View own profile (limited fields) ▪ Download salary slips ▪ View notices from Admin Change their account password
----------	---------	--

Table (1) — User Roles

3 Detailed Functional Requirements

In this chapter, the functional requirements associated with a feature will be described for the **ASF ERP system (HRM)**. These are the software capabilities that must be present for the user to perform the services provided by the feature.

The following sub- sections contain all the software requirements to a level of detail sufficient to enable designers to design, develop **ASF ERP system (HRM)** and testers to test the system to satisfy those requirements.

This section specifies-at a minimum-the transformation of inputs into outputs and all functions performed by the system in response to an input or in support of an output. This description may consist of a model of the requirements, such as **data flow diagrams** and **use cases**,

3.1 User signup and login

FRS REQ ID	FRS001
REQ Title	Users sign up & login system
User Story	As a user I want to sign up in the system and want to login as well.
Current Scope	Not available
Proposed Scope	As per the business requirements system will allow to sign up and log in.

Functional Requirements Specification:

Functional rule (FRS001)	- User signup and login 1) Google SSO 2) Email Signup page. - Signup page data field 1) First Name 2) Last Name 3) Email/username (A welcome email will be sent with a login bar code after the signup process) 4) Mobile Phone (OTP verification) 5) Address 6) Password 7) Re-type Password 8) Role (like role will be "HR manager/Staff") After the sign-in need a basic setup page before using the dashboard. Then the user-wise dashboard will be populated.
--------------------------	--

Assumptions	N/A
Constraints	Email verification / OTP
Access criteria	Password, email, OPT
Priority	[Yes] essential [] conditional [] optional

3.1.1 Use Case of signup & login

Google SSO:

City, airport, address, or hotel

Become a host

Sign in - Google Accounts - [InPrivate] - Microsoft Edge

https://accounts.google.com/v3/signin/identifier?oppara...

3.2 HRM Dashboard Features

FRS REQ ID	FRS002
User Story	As per the domain and user expectation, we have described some of HRM dashboard components
REQ Title	Dashboard descriptions.
Current Scope	Not available
Proposed Scope	As per the business requirements, system will be able to adopt the below listed core dashboard features as per ASF HRM module requirements

Functional rule (FRS002)	The HRM dashboard will contain some of the features which are described as follows: Employee Statistics - The system must display the total number of current employees. - The system must display the number of new employees added in the current cycle (month). - The system must show the count of permanent employees. - The system must show the count of probation employees. - The system must allow filters (Day, Month, Date Range) for all employee statistics. Attendance Summary - The system must display the total present employees. - The system must display the total absent employees. - Filters must be available to generate attendance for Day, Month, or Date Range. Leave Summary - The system must show the total number of leave applications. - Filters must be available for Day, Month, or Date Range. Calendar - The dashboard must include a read-only calendar showing holidays, events, and notices. N.B: System will display the user wise specific dashboard based on the user's role and permission.
Assumptions	N/A
Constraints	N/A
Access criteria	User role wise access to the respective module
Priority	[Yes] essential [] conditional [] optional

3.3 Employee Management Features

FRS REQ ID	FRS003
User Story	HR officer & Manager will be able to use the all the functional facilities of the employee management features
REQ Title	All the functional facilities of the employee management module
Current Scope	Not available
Proposed Scope	As per change, system will allow to perform all the functional facilities of the employee management module

Functional Requirements Specification:

Functional rule (FRS003)	The employee management feature will cover the below features: - The system must allow HR/Admin will be able to enter the following fields: Employee Basic Info - Employee Name - Employee ID (Auto/Manual generation option) - Mobile Number - Email Organizational Details - Select Institution (From predefined list) - As-Sunnah Foundation - Madrasatus Sunnah - Select Branch (Branch can be added by admin) - Select Department - Select Designation Employment Details - Joining Date - Employment Status (Probation / Volunteer / Intern / Permanent) - Salary Information - Bank Information Personal Information - Date of Birth - Blood Group - NID/Passport Number
--------------------------	---

	• Marital Status Emergency Contact • Name • Relationship • Mobile Number • Address Address Details • Present Address • Permanent Address Attachments • CV upload • Profile Image upload Employee List • System must display a filterable and searchable employee list. • Users must be able to filter by institution, branch, department, designation, status. • Each row must show basic info (Name, ID, Department, Mobile, Status). • Clicking an employee opens full profile. Employee Edit • HR/Admin can edit all fields. • System must track edit history (optional audit trail). • Validation must run on all edits. Employee View Page System must display all employee information including: • Profile Picture • Personal & employment details • Emergency contact • Salary info • Banking info • Uploaded CV • Leave Calendar • Total Days of Employment (auto-calculated)
--	---

	○ System must validate required fields before saving. ○ System must prevent duplicate Employee IDs (unless manual override). ○ System must store uploaded files securely. ○ System will adopt the organizational leave calendar. ○ System will display the all-employee related information based on the roles and permission to other users.
Assumptions	NA
Constraints	NA
Access criteria	User account & Password
Priority	[Yes] essential [] conditional [] optional
Assumptions	NA
Constraints	Role access
Access criteria	N/A
Priority	[Yes] essential [] conditional [] optional

3.4 Payroll Management Module

FRS REQ ID	FRS004
User Story	User will be able to use all the functional facilities of this payroll management features and process.
REQ Title	The functional facilities of this Payroll management
Current Scope	Not available
Proposed Scope	As per change, the system will allow performing all the functional facilities of payroll management module and process

Functional Requirements Specification:

Functional rule (FRS011)	• Payroll System will be able to calculate the salary structure automatically: ○ Gross Salary ○ Basic ○ House Rent ○ Medical ○ Conveyance ○ Provident Fund deductions
--------------------------	---

	- Accounts Manager will be able to enter/configure the designation wise salary structure Payroll List View Payroll list must include: - Serial - Employee Name - Designation - Salary breakup (Basic, House Rent, Medical, Conveyance) - Over Time - Compensation Days - Gross Salary - Absent Days - Tax - PF Amount - Net Salary Salary Payment - System must allow selecting payment method: - Bank - Cash - Cheque - Admin must be able to upload bank-specific templates. - System must generate payment sheets automatically. Salary Pay slip Employees, HR and accounts manager must be able to: - View monthly pay slip online. - Download pay slip as PDF. - Receive pay slip via email automatically once salary is processed. - See all adjustments, allowances, tax, PF, deductions clearly. Salary Certificate - System must allow HR to create a salary certificate for any employee. - The format must be customizable. - Must include salary breakdown, tenure, and signature fields.
Assumptions	NA

Constraints	Role access
Access criteria	User credentials
Priority	[Yes] essential [] conditional [] optional

3.5 Leave Management Module

FRS REQ ID	FRS005
User Story	User will be able to use all the functional facilities of leave management features and process.
REQ Title	The functional facilities of this leave application and management
Current Scope	Not available
Proposed Scope	As per change, the system will allow performing all the functional facilities of employee leave application and management module

Functional Requirements Specification:

Functional rule (FRS011)	Leave Dashboard - There will be a leave dashboard in leave management module with the below data points: - Total Leave Applications - Accepted Applications - Rejected Applications - Pending Applications - There will be the filtering option by employee, date, supervisor, leave type - Leave application will be available hierarchy wise to the respective supervisor dashboard. - Supervisor will able to accept or reject the leave application Leave Application Submission - In Leave Application from employee basic information fields will be auto populated - Name - ID - Department - Designation - Supervisor details
--------------------------	---

	- Employee will be able to select leave type, leave date, leave slot and notes to submit the application - HR/Accounts/Supervisor will be able to see the short information of the employees as below: - Personal details - Leave data - Attendance data - Employment status - HR admin will be able to add leave type/category from the system - Leave Application Approval Workflow - Supervisor must approve/reject leave. - HR must have override ability. - System must update leave balance automatically. - All actions must trigger notification. - System will be able to: - Validate leave balance before submission. - Notify Supervisor via SMS/Email. - Notify HR/Admin for processing.
Assumptions	NA
Constraints	Role access
Access criteria	User credentials
Priority	[Yes] essential [] conditional [] optional

3.6 Attendance Tracking and Management Module

FRS REQ ID	FRS006
User Story	User will be able to use all the functional facilities of attendance management features.
REQ Title	The functional facilities of attendance management and Tracking
Current Scope	Not available
Proposed Scope	As per change, the system will allow performing all the functional facilities of employee attendance management module

Functional Requirements Specification:

Functional rule (FRS011)	- There will be attendance monitoring dashboard under attendance tracking module where HR Admin/Manager will be able to see the insight of the attendance of the employees. - The biometrics attendance device need to integrate with the attendance Tracking module - System will be able to track Biometrics/In-Out of the employees - System must sync data from a biometric attendance device daily. - Each employee's login/logout timestamps must be stored daily. - Employee will be able to see only his/her attendance report Attendance View HR Admin/Manager will be able to: - View attendance logs for any employee. - Filter by date or date range. Attendance Reports System will have the facilities to generate the below reports: - Employee wise Attendance summary/tracking reports - Detailed timestamp logs - Employee wise Absent reports - Exporting reports to Excel/PDF
Assumptions	NA
Constraints	Role access
Access criteria	User credentials
Priority	[Yes] essential [] conditional [] optional

3.7 Expense Management

FRS REQ ID	FRS007
User Story	User will be able to use all the functional facilities of expense management features.
REQ Title	The functional facilities of expense management features
Current Scope	Not available

Proposed Scope	As per change, the system will allow performing all the functional facilities of employee expense management module
----------------	---

Functional Requirements Specification:

Functional rule (FRS011)	- There will be expense monitoring dashboard under expense management module where HR Admin/Manager will be able to see the insight of the expense of the employees. Expense Claim Submission Employees will be able to: - Create expense claims - Select claim category - Enter amount - Upload documents (images, PDF, receipts) System must: - Route claim to supervisor for approval - Notify admin after approval Claim Category Management (Admin Only) Admin must be able to: - Create new claim categories - Categories Bank Charge - Advance - Cash - Company Tax - Conveyance - Purchase - Edit category names - Set claim limits (optional) Claim Report System will be allowed generating reports by: - Date range - Category - Status (Pending/Approved/Rejected)
--------------------------	---

	Report must be exportable (Excel,Word,PDF)
Assumptions	NA
Constraints	Role access
Access criteria	User credentials
Priority	[Yes] essential [] conditional [] optional

3.8 Policy Management Feature

FRS REQ ID	FRS008
User Story	User will be able to use all the functional facilities of policy management features.
REQ Title	The functional facilities of policy management features
Current Scope	Not available
Proposed Scope	As per change, the system will allow performing all the functional facilities of employee policy management Features

Functional Requirements Specification:

Functional rule (FRS011)	- There will a system feature to configure the policy of the organization and the policy must have to approved by senior management through the system Calendar Management Admin/HR Admin must be able to: - Create office holiday calendar - Add/edit/delete holiday dates - Sync holidays to employee dashboards & attendance Salary Structure Rules HR/Accounts Admin must be able to: - Define salary calculation rules - Configure percentages for Basic, House Rent, Medical, etc. - Set PF contribution policies
--------------------------	---

	○ Apply rules across employees or specific groups
Assumptions	NA
Constraints	Role access
Access criteria	User credentials
Priority	[Yes] essential [] conditional [] optional

3.9 Notice Board Feature

FRS REQ ID	FRS009
User Story	User will be able to use all the functional facilities of notice board features.
REQ Title	The functional facilities of notice board
Current Scope	Not available
Proposed Scope	As per change, the system will allow performing all the functional facilities of Notice board Features

Functional Requirements Specification:

Functional rule (FRS011)	• There will a system feature to create the notice of the organization and the policy must have to approved by senior management through the system Create Notice (HR Admin /Manager Only) Admin will be able to do the below action in the notice board feature: • Create a notice • Attach documents • Set visibility to: ○ Individual employee ○ Department ○ Branch ○ All employees • System will have the facility to export of notices by date range
--------------------------	---

	View Notices All employees must see: ○ Title ○ Description ○ Attachments ○ Published date
Assumptions	NA
Constraints	Role access
Access criteria	User credentials
Priority	[Yes] essential [] conditional [] optional

3.10 User Management Module

FRS REQ ID	FRS010
User Story	User will be able to manage all the system users using this feature
REQ Title	The functional facilities of user management
Current Scope	Not available
Proposed Scope	As per change, the system will allow performing all the functional facilities of user management

Functional Requirements Specification:

Functional rule (FRS011)	• HR admin/System admin will be able to use the all user management features • All user information will be editable by the HR Admin or system admin User Account Management The system must allow HR Admin to: 1. Create new user accounts. 2. Enter user details:
--------------------------	---

	○ Name ○ Email ○ Mobile ○ Employee ID (linked to Employee Module) ○ Role Assignment ○ Status (Active/Inactive) 3. Edit user details (except password). 4. Activate/Deactivate user accounts. 5. Delete users (soft delete recommended). 6. Search and filter users by: ○ Name ○ Employee ID ○ Role ○ Status System behavior: • User cannot log in until account is activated. • Deleted user cannot access the system. • Inactive user receives error "Account Disabled." Role Management System must provide predefined roles, e.g.: • Admin • HR Admin • Supervisor • Employee • Finance/Payroll • Custom Roles (Created by Admin) Capabilities including: • Add/Edit/Delete Employee • Approve Leave • View Payroll • Edit Salary Structure • Access Dashboard • Manage Notices • View Attendance • Approve Claims • Edit Policies Role-wise Authentication & Permission Control The system must enforce: ○ Page-level access control
--	---

	○ Module-level access control ○ Action-level permission (Create/Read/Update/Delete) ○ Feature-level access control (Example: Salary breakdown view only allowed for Payroll role) User Profile Management The system must allow users to: ○ View: 1. Image 2. Name 3. Employee ID 4. Email 5. Mobile 6. Attendance Percentage 7. Leave Claimed/Remaining 8. Employment Status ○ Update: 1. Password ONLY (by HR admin)
Assumptions	NA
Constraints	Role access
Access criteria	User credentials
Priority	[Yes] essential [] conditional [] optional

3.11 Report Module

FRS REQ ID	FRS011
User Story	Admin/HR/Accounts User will be able to export the customize reports
REQ Title	The functional features of reporting Module
Current Scope	Not available
Proposed Scope	As per change, the system will allow performing all the functional facilities to prepare and visualize reports based on user type

Functional Requirements Specification:

Functional rule (FRS011)	The Report Module must: • Provide consolidated reporting for all major modules. • Allow users to apply dynamic filters (department, branch, employee, date range, etc.). • Provide multiple export formats: ○ PDF ○ Excel (XLSX) ○ CSV • Allow users with proper permissions to schedule reports (Optional). • Offer secure access based on user role and permissions. • Maintain consistency across all HRM modules Report Categories The Report Module must include reports from the following modules: • Employee Reports ○ Employee Basic Information Report ○ Employee Status Report (Probation/Permanent/Intern/Volunteer) ○ New Employee Report ○ Employee Separation (Inactive) Report ○ Department-wise Employee Distribution ○ Branch-wise Employee Distribution • Attendance Reports ○ Daily Attendance Summary ○ Date Range Attendance Report ○ Employee-wise Attendance History ○ Late Entry Report ○ Early Exit Report ○ Absent Report ○ Monthly Attendance Summary ○ Biometrics-Based Raw Log Report • Leave Reports ○ Leave Application Summary (Accepted/Rejected/Pending) ○ Employee-wise Leave Balance Report ○ Leave Type Usage Report (Casual, Annual, Medical, Maternity, etc.) ○ Department-wise Leave Report
--------------------------	---

	○ Supervisor Approval Time/Response Report • Payroll Reports ○ Monthly Payroll Sheet ○ Salary Breakdown Report ○ Tax Deduction Report ○ Provident Fund Contribution Report ○ Over Time Report ○ Compensation Workday Report ○ Bank Payment Sheet (Based on Template) ○ Salary Disbursement Status Report (Paid/Unpaid) • Expense Reports ○ Expense Claim Report ○ Category-wise Expense Report ○ Approved/Rejected/Pending Claim Report ○ Employee-wise Expense Summary ○ Date Range Expense Analytics • Notice Board Reports ○ Department/Branch Notice Report • User Management Reports ○ System User List ○ Active/Inactive User Report ○ User Login History Report ○ Failed Login Attempt Report ○ Password Reset Log Report
Assumptions	NA
Constraints	Role access to module
Access criteria	User credentials
Priority	[Yes] essential [] conditional [] optional
